DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Sho (JP 56-18500).

Sho discloses a folding machine with folding cylinder fixed 37 and rotating 30 cams; fixed 79 and rotating 11 jaw cylinder cams; see figure 3. The system operates switching between a collect and straight run mode. It is uncertain whether or not Sho discloses embodiments containing an odd number of folding elements (six shown in figure 3). However, Sho recognizes that either the prior art or an embodiment of figure 2 (see abstract, first paragraph) teaches an odd number (three) of folding pins and blades. It would have been obvious to one of ordinary skill in the art to use a folding cylinder with an odd number of folding elements for operating the modes taught by Sho.

Art Unit: 3721

4. Alternatively, claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 56-18500 in view of Lange (US 4,892,036).

For the limitations possibly deficient as described above, Lange teaches a combination collection and folding system capable of switching from a collection mode to a straight run mode with folding cylinder with an odd number of folding pin elements 10. It would have been obvious to one of ordinary skill in the art to incorporate the teachings of Lange in the invention to Sho for successfully operating two separate modes of operation.

Response to Arguments

Regarding the limitation of operating at an equal frequency, Sho discloses operating once per rotation thereby anticipates the limitation.

Regarding the limitation to prevent paperless strikes, one Sho discloses an operation for performing transfer of paper products, controlling the jaw mechanism to prevent paperless strikes is considered disclosed by Sho in order to maximize the efficiency of the operation or at least (if not directly taught) obvious to control by way of timing or cam structure.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3721

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
